## Appendix Figure 1. Study Sample Construction

Patients with first incidence of kidney failure between January 1, 2012 and December 31, 2019 (determined as first initiation of maintenance dialysis or receipt of preemptive kidney transplant) ( $\mathrm{N}=973,498$ )

Incident adult patients (18 or older)
who initiated dialysis between 2012-
2019 ( $\mathrm{N}=(946,775$ )

Incident adult patients who initiated dialysis between 2012-2019 and had full county information $(N=(930,123)$

*p $<0.001$ for all comparisons. +Urban/rural designation was based on 2013 classification using U.S. Department of Agriculture classifications. Values represent county-level means overall and by county-level dialysis facility supply. For example, an average of $22.1 \%$ (SD $3.8 \%$ ) of the population was under the age of 18 in counties that had 0 facilities.
