### On the Cover

Kidney post-mortem findings: Narrow, septated hyphae with dichotomous acute angle (45°), morphologically consistent with *Aspergillus*, were identified in the areas of renal cortical infarction, as well as in some blood vessel walls [not shown] (Grocott's methenamine silver stain, 400X). Figure 1C in "Acute Kidney Injury in a Patient on High-dose Glucocorticoid Therapy" by Lanny T. DiFranza and Dominick Santoriello. KIDNEY360 2: 1686–1687, 2021. DOI: 10.34067/KID.0003072021.
