On the Cover

PAS-stained kidney section (original magnification $\times 200$) showed a moderate, diffuse, potentially partially reversible tubular damage. In one dilated glomerular capillary a small group of atypical polygonal cells with intercellular bridges and enlarged nuclei stood out. This detail from that section shows the atypical cells in higher magnification (original magnification $\times 400$). Insert panel from Figure 1A of "An Unsuspected Histological Finding in a Patient with Cancer and AKI" by Felicitas E. Hengel, Thorsten Wiech, and Ulrich Wenzel. *Kidney360* 3: 1996–1997, 2022.
